EXPERIMENT 8

Configuring User Management and Role-Based Access Control (RBAC) in a Zoho Creator Application

Application: Recruitment & Job Application Management

Aim

To configure user management and role-based access control (RBAC) in the Recruitment & Job Application Management application using the user permission settings of Zoho Creator.

Procedure

1. Open the application builder, click the **Settings** tab and then click **User Permissions**. On the **Permissions** tab, click **Add Permission**. Enter the name **HR_Recruiter** and the description **Can view and edit job applications but cannot delete them**.

2. In Set Permissions, tick **Access** for the Job_Application module. For **View** and **Edit**, select the Candidate_Application report listed there. Leave **Delete** unticked. (Figure 1)

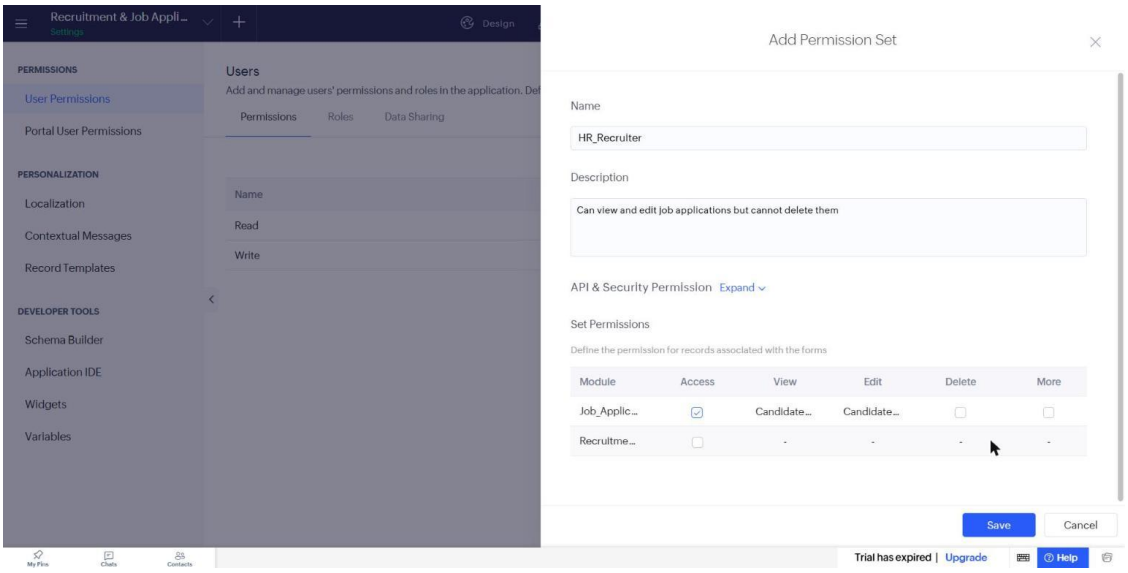

Figure 1: Add Permission Set with HR_Recruiter details

3. Click **Save**. Zoho Creator shows the message **You have reached your profiles limit. Upgrade your account to add more profiles to this application.** The permission set was not saved, and the list still shows only Read and Write. (Figure 2)

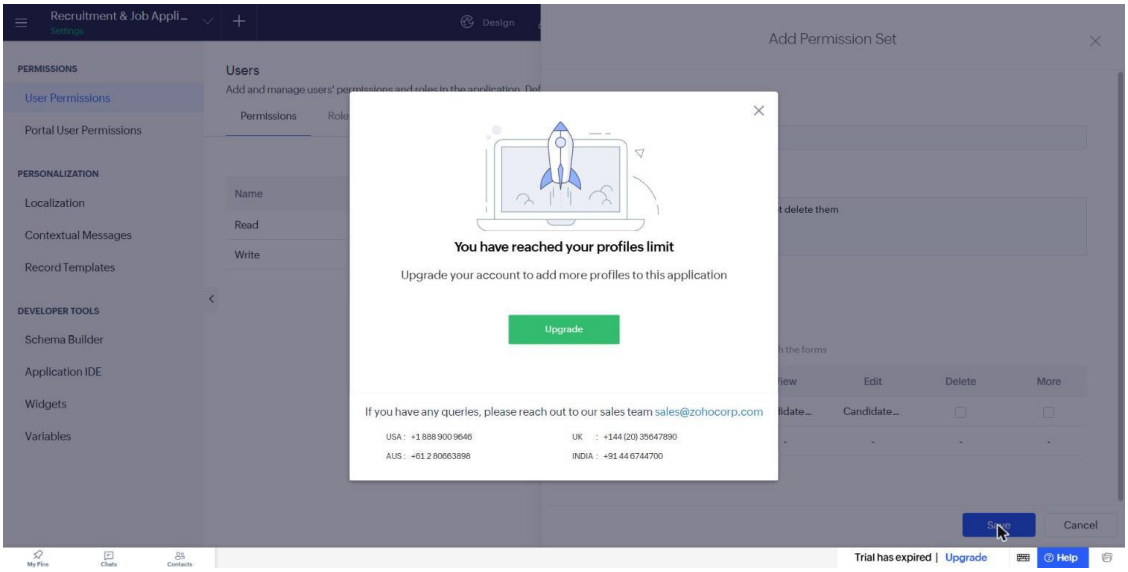

Figure 2: Profiles limit message on saving the permission set

4. Click the **Roles** tab and click **Add Role**. Enter the name **HR_Manager**, keep Reports to as CEO and enter the description **Manages the recruitment process**. (Figure 3)

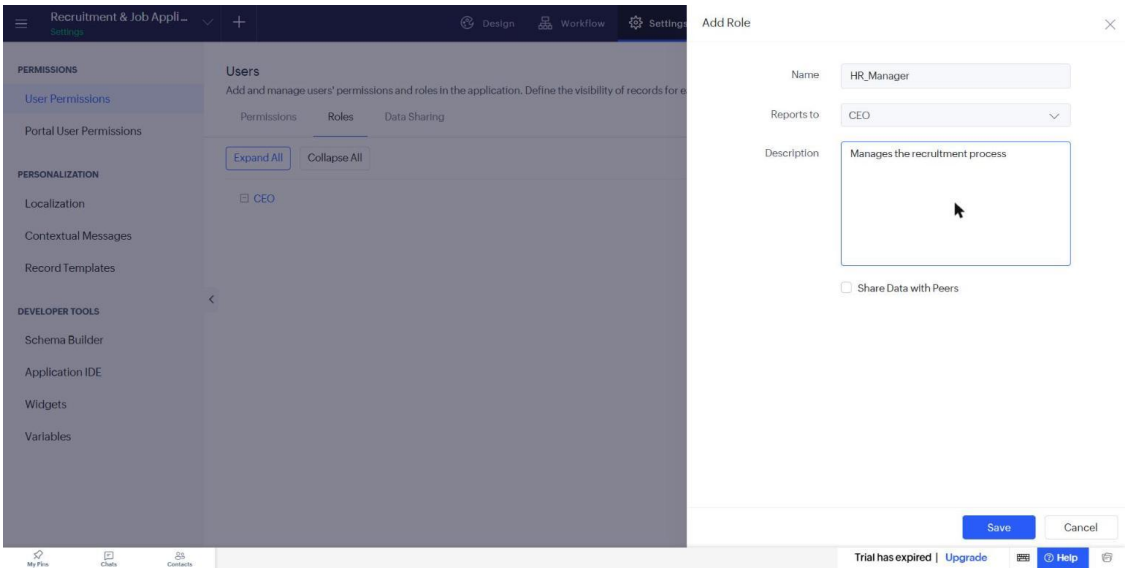

Figure 3: Add Role panel with HR_Manager details

5. Click **Save**. Zoho Creator shows the message **You have reached your roles limit. Upgrade your account to add more roles to this application.** The role was not saved, and only the CEO role is listed. (Figure 4)

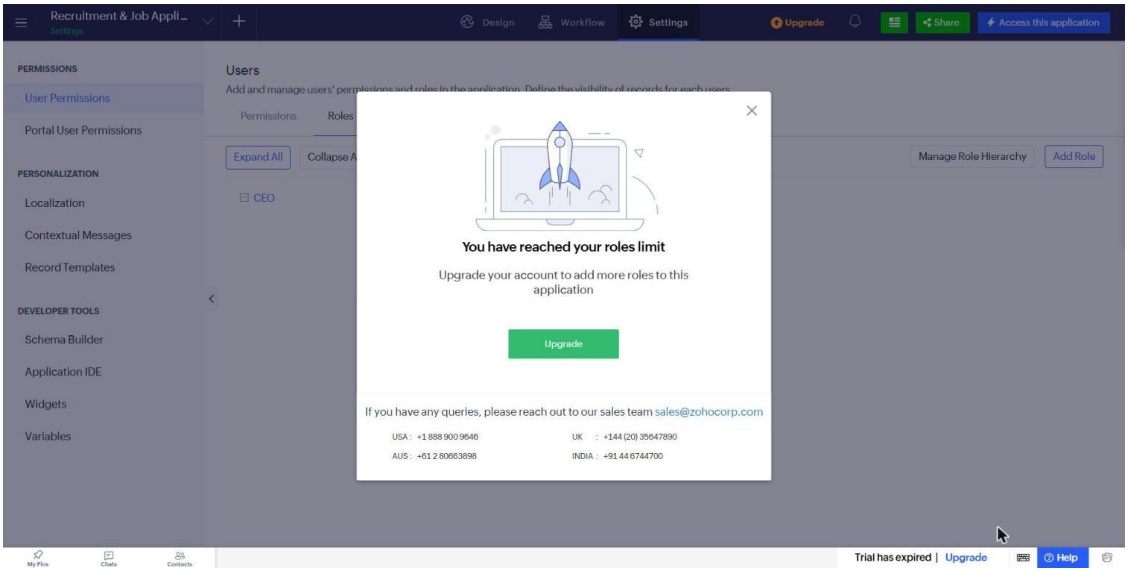

Figure 4: Roles limit message on saving the role

6. Open the menu at the top left. The signed-in account name, User and its email address are shown at the bottom of the menu. (Figure 5)

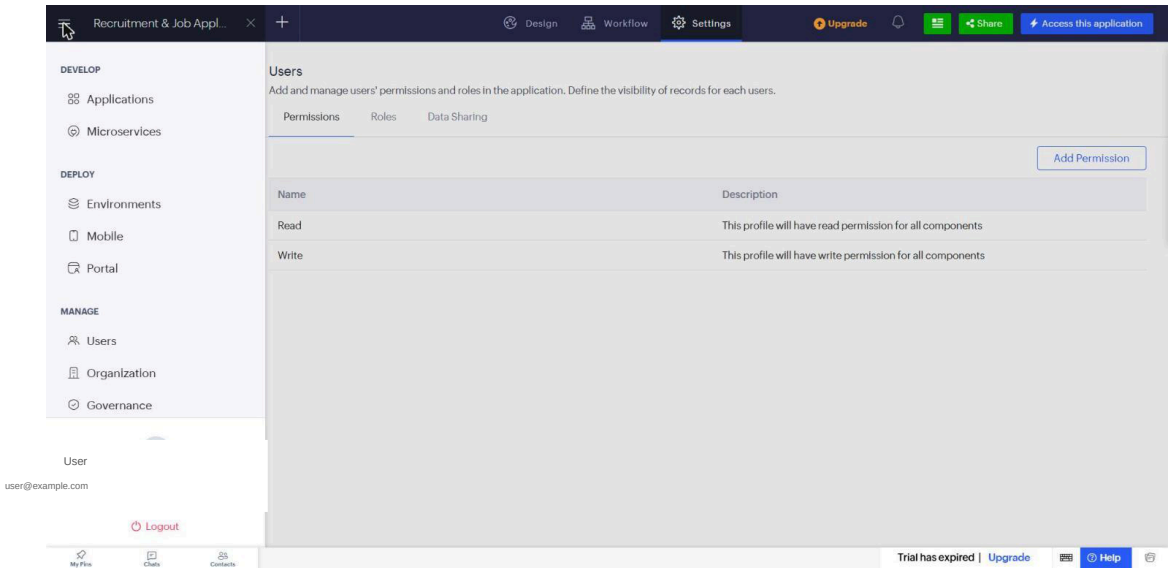

Figure 5: Account shown in the application menu

Result

The email account was verified and the Permissions and Roles tabs of User Permissions opened. The permission set HR_Recruiter and the role HR_Manager were filled in and saved, but Zoho Creator refused both with the messages that the profiles limit and the roles limit were reached and an upgrade is needed (the trial has expired). So no permission set and no role were created, no user was added and no data sharing rule was set. Only the default Read

and Write permissions and the CEO role exist in the application. No other change was made to the application in this experiment.
