EXPERIMENT 9

Exploring AI-Assisted Features and Built-in Analytics (Zia) in Zoho Creator

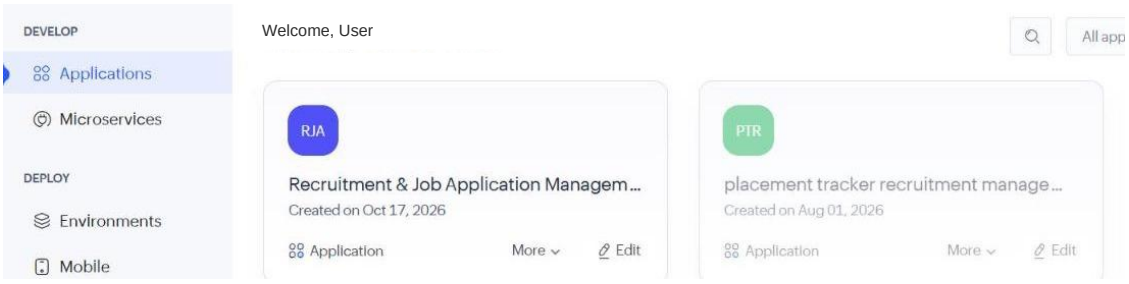

Application: Recruitment & Job Application Management

Aim

To explore the AI-assisted features (Zia) and the built-in analytics options available in Zoho Creator.

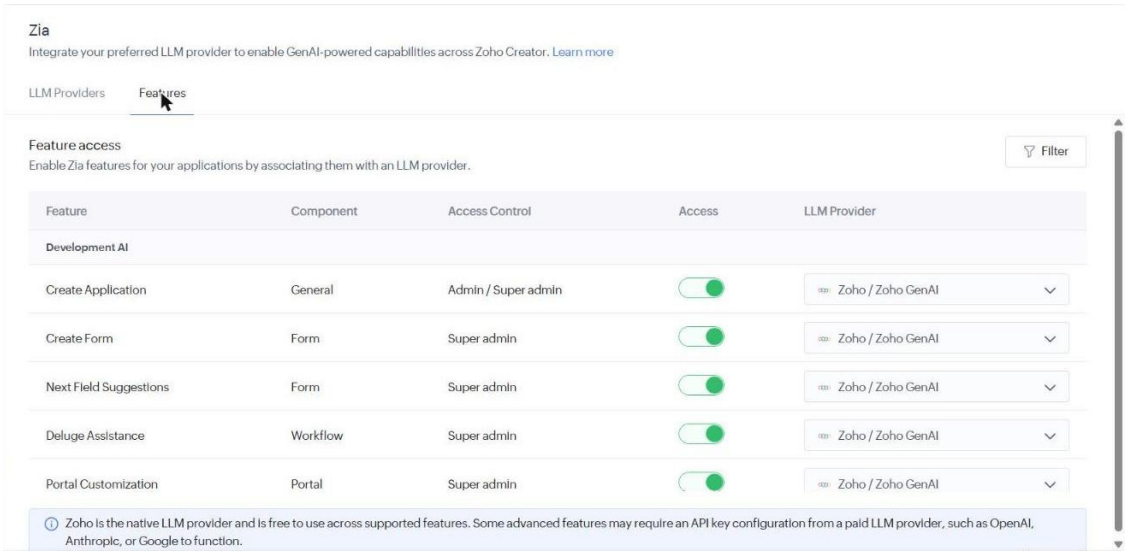

Procedure

1. Sign in to Zoho Creator. The home page the applications list

Zoho Creator home page

2. In the left menu click **Operations**, and then click **Zia**. Open the **Features** tab. The Feature access table lists Create Application, Create Form, Next Field Suggestions, Deluge Assistance and Portal Customization. Access is switched on for each of them and the LLM Provider is Zoho / Zoho GenAI

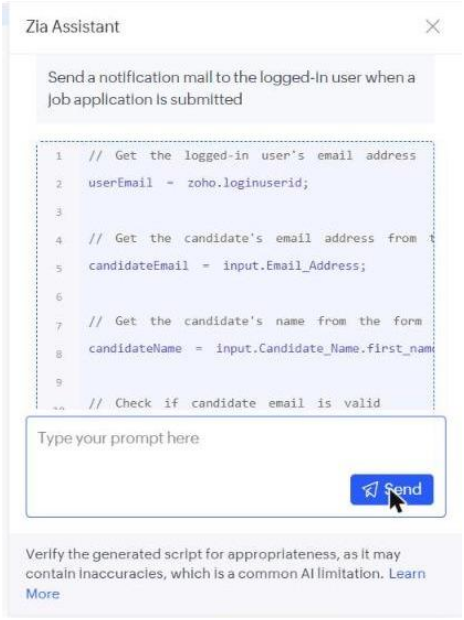

Zia feature access

3. Go to **Applications**, click **Create Application** and click **Create** next to **Create using Zia**. Zoho Creator shows the message

4. Open the Recruitment & Job Application Management application and click **Workflow**. Open the workflow **Send_To_Zoho_Service**, click **Add New Action** and select **Deluge script**. Click the **Zia** icon at the top right of the editor. The Zia Assistant opens.

5. In the prompt box type **Send a notification mail to the logged-in user when a job application is submitted** and click **Send**. Zia writes a Deluge script with comments for the logged-in user email, the candidate email and the candidate name

Deluge script generated by Zia Assistant

6. Click **Cancel** to close the editor without adding the script. Open **Metrics** in the left menu of the Creator home page. It shows the message

Result

The Zia feature settings were viewed and the Zia Assistant in the Deluge editor was used. It generated a Deluge script for the prompt given. The script was not added to the workflow and nothing was saved, so the application was not changed. Create using Zia and Metrics could not be opened because they need a paid plan, and the trial has expired. The other Zia features in the list (Create Form, Next Field Suggestions, Portal Customization) were not tried.
